

Using NAFI – on a mobile phone

Although it's not set up for use on mobile phones, you can use NAFI on a mobile phone, particularly if it is a more recent phone with a large display.

1. **Enter the NAFI address in your mobile web browser** (NAFI should work in most mobile browsers) and you get something like the display below at left:

2. **Choose the appropriate map from the list to view your area of interest and then press the “HIDE MENU” option (circled).** You should then see the NAFI map display at right. You can zoom in and out and pan with your fingers as you would with a regular mobile map – but the displayed navigation controls won't work.
